

SkyLooms

WEAVING SEAMLESS JOURNEYS, BEYOND JUST FLIGHTS

History

EXISTING SYSTEM

Flight reservations, Manual search for hotels and transportation separately, Time-consuming and inefficient.

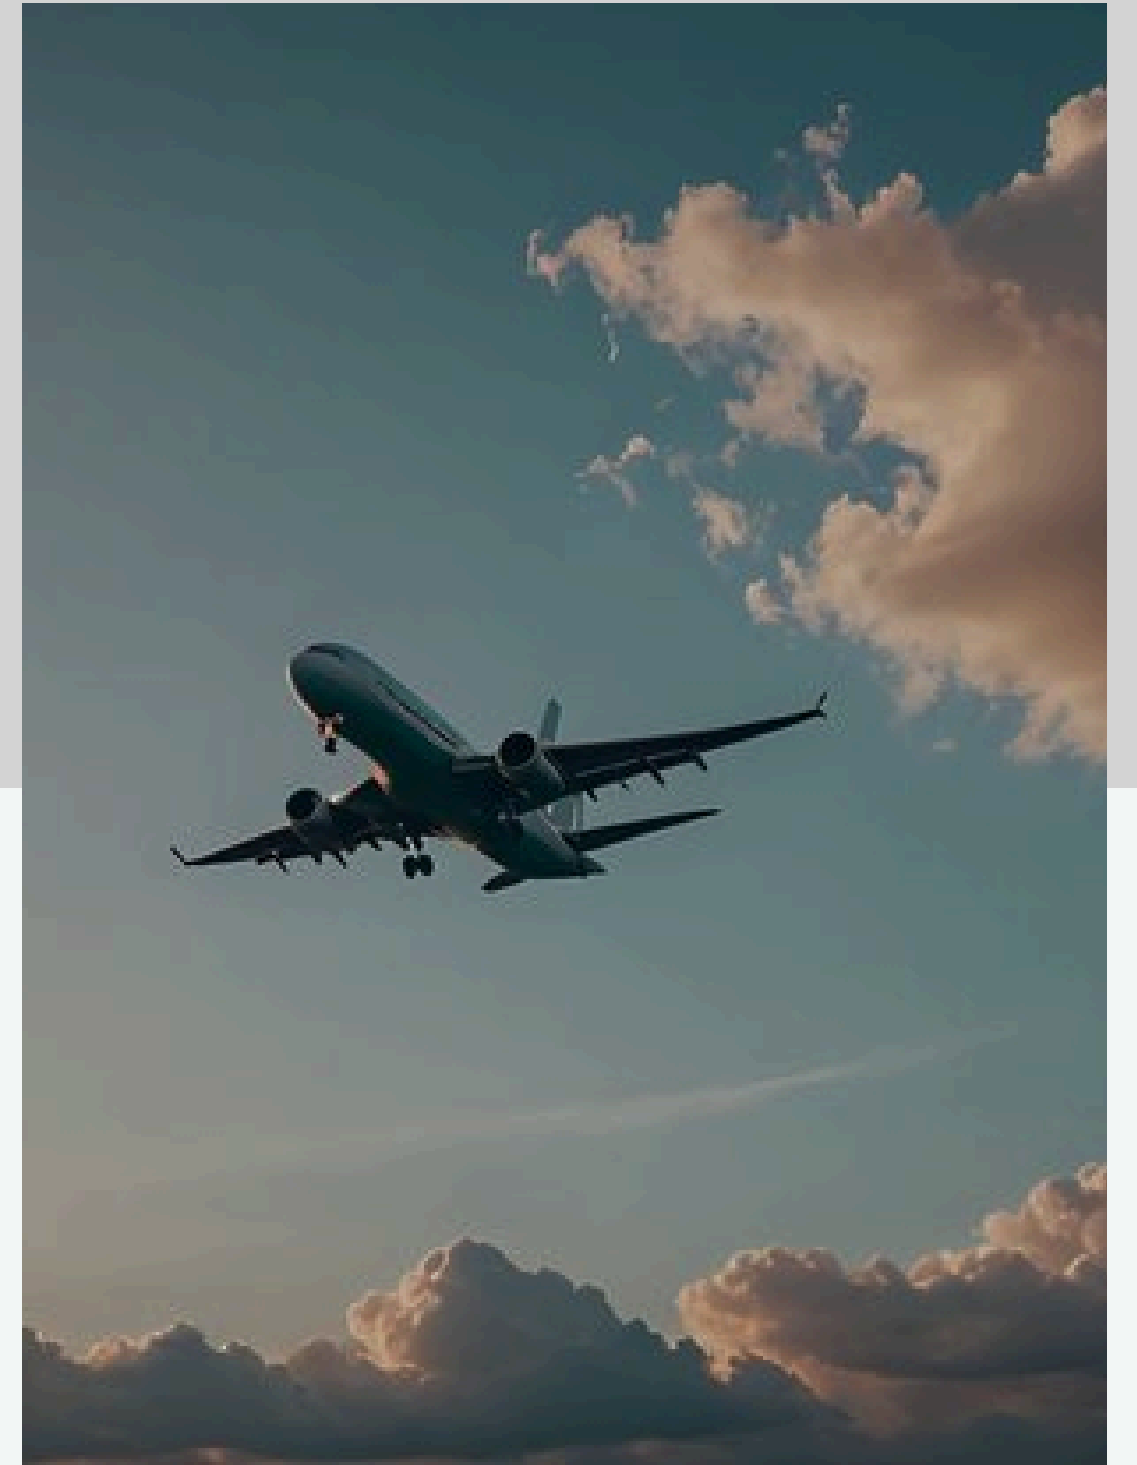

PROPOSED SYSTEM

SkyLooms introduces an AI-powered platform with chatbot automation, enabling one-tap booking, cancellation, and smart travel recommendations.

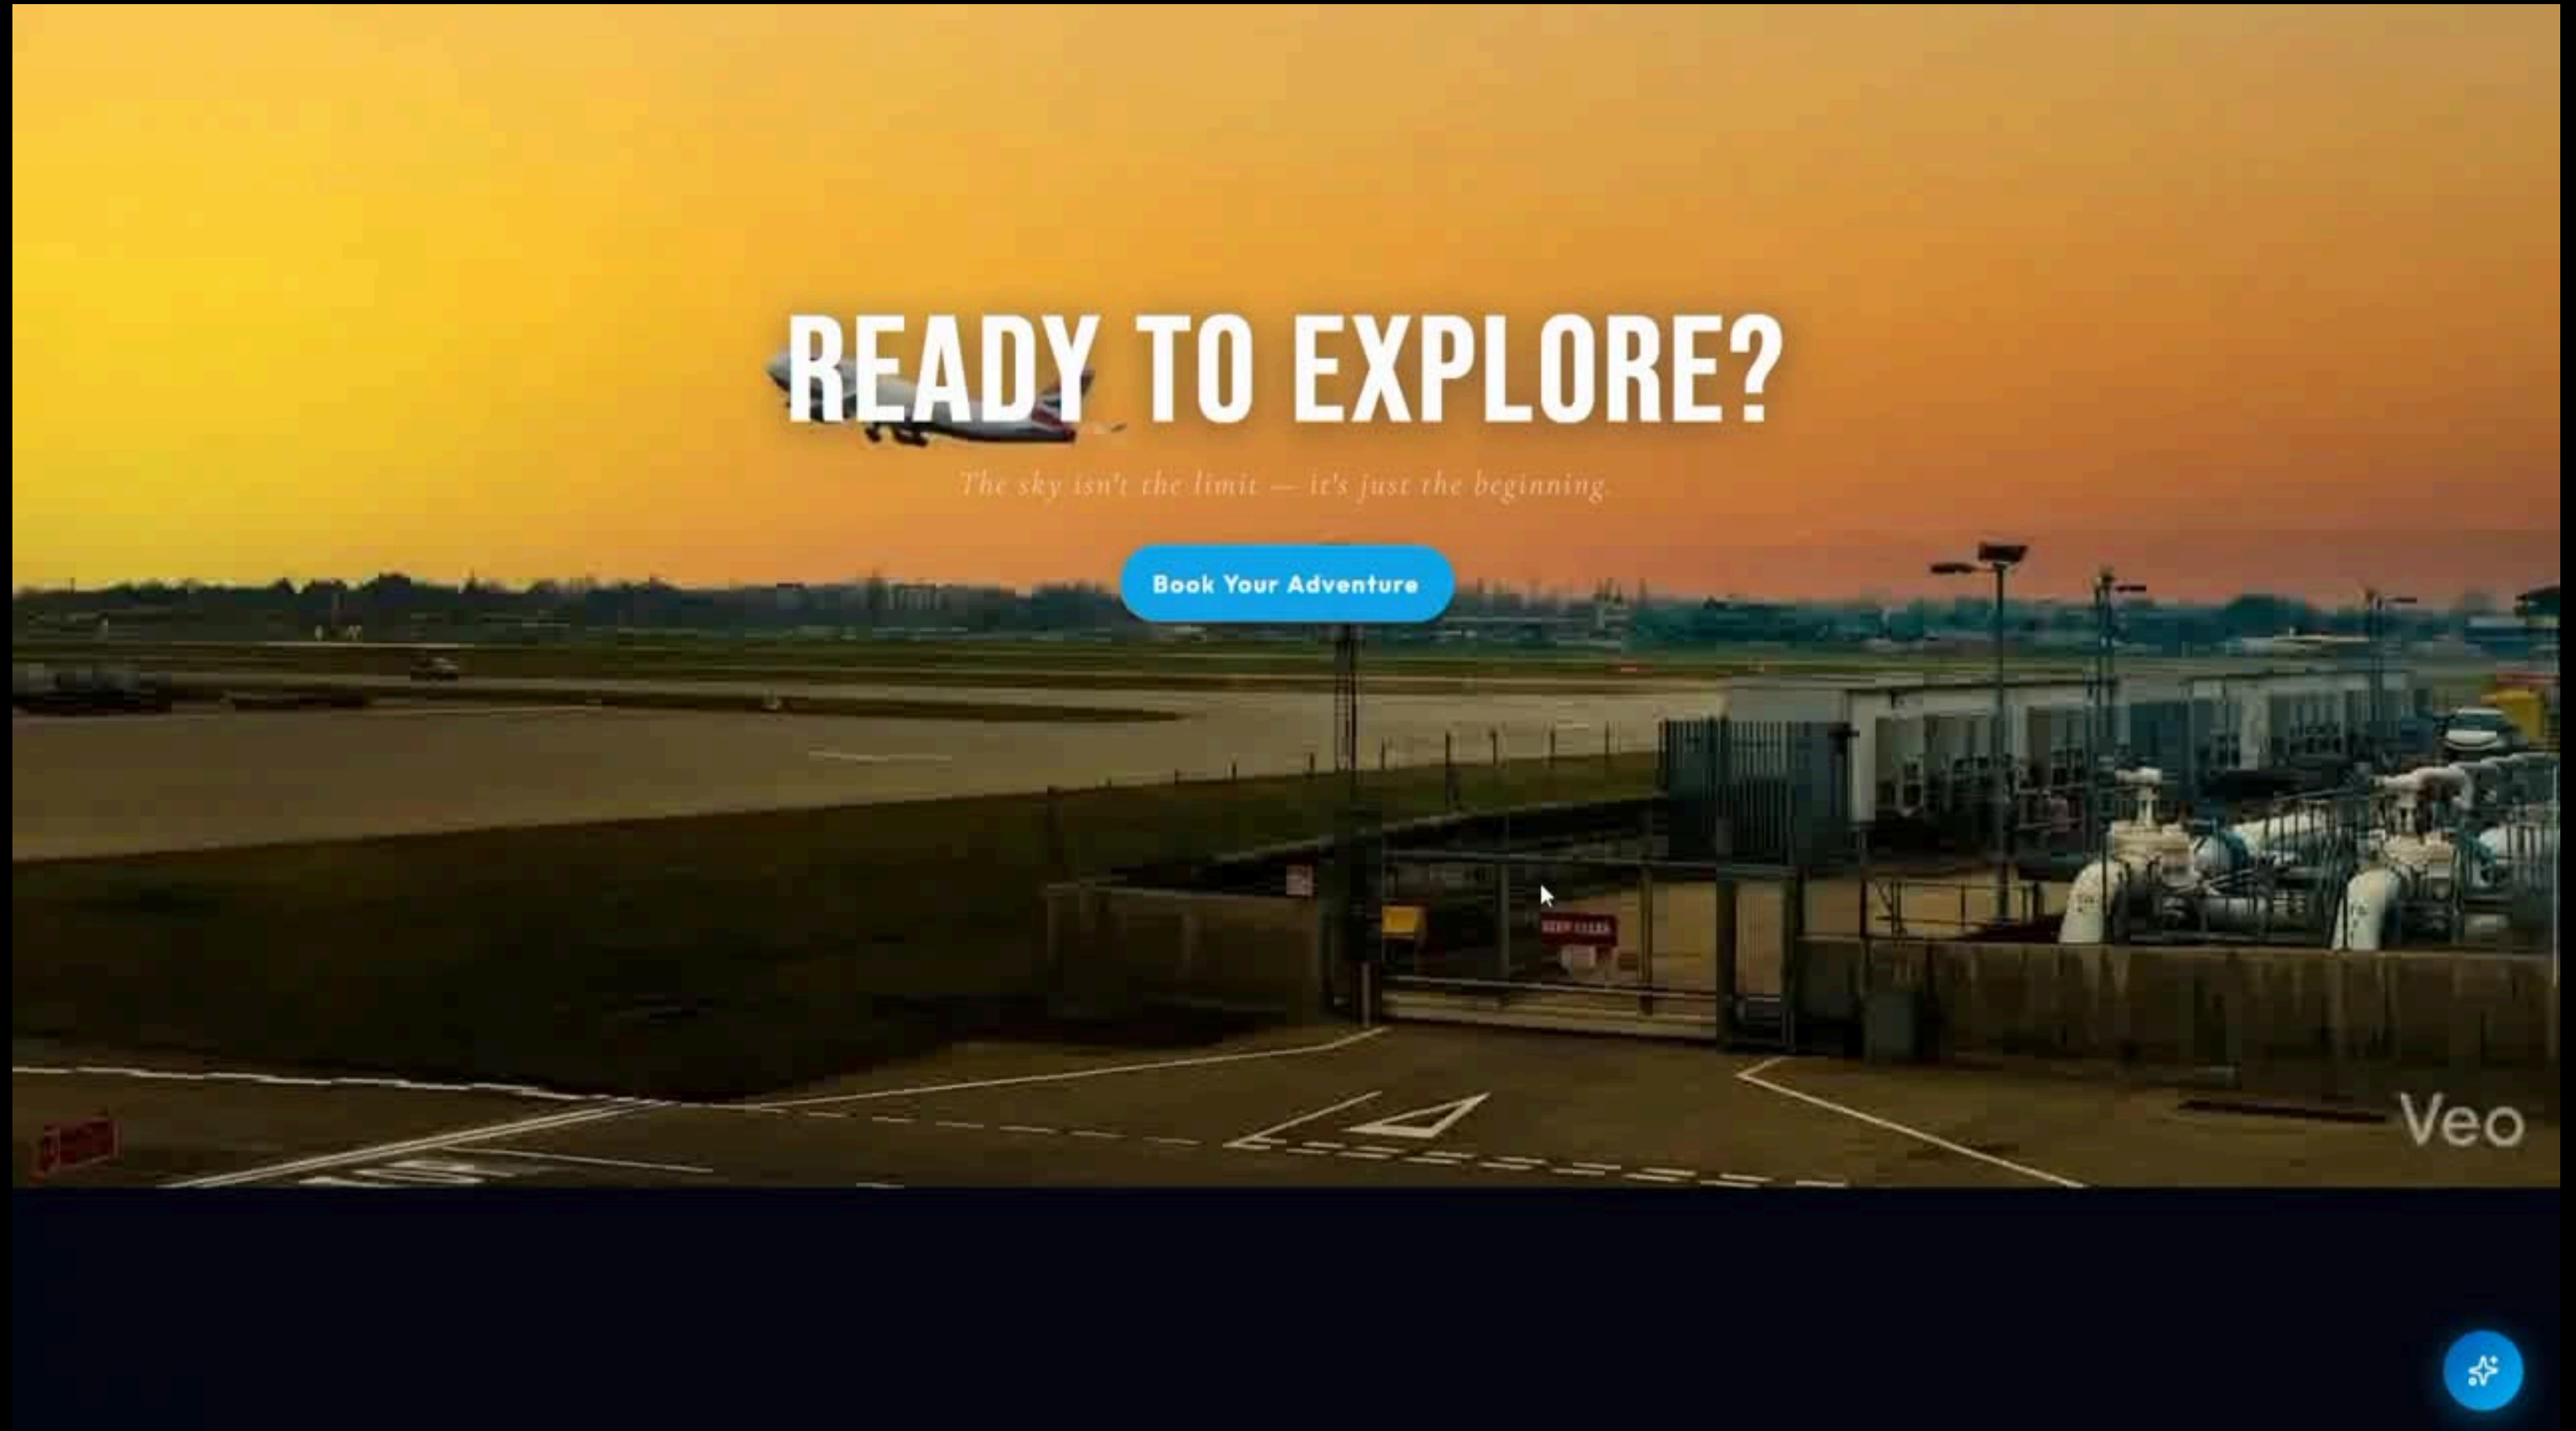

Abstract

Simplifying Travel Planning

SkyLooms is a full-stack travel booking platform that enables users to search, book, and manage flights along with hotel and cab recommendations. It integrates an AI-based chatbot with intent detection to automate booking, cancellation, and enhance user experience with features like flight tracking simulation.

What we do?

Modules

1. User Interface

Handles all user interactions through a responsive UI, including search, booking screens, and chatbot interface for easy navigation.

2. Booking and Management

Manages flight search, ticket booking, cancellation, and provides a flight tracking simulation for visualizing travel status.

3. Recommendation

Provides personalized hotel and cab suggestions based on user destination, preferences, budget filters, and passport ID.

4. AI module

Processes user requests using AI-based intent detection and handles backend operations, APIs, and database management.

Modules

5. Flight Simulation

A deterministic flight simulation engine that mimics real-world aviation APIs with zero external dependencies.

6. Admin Module

A centralized admin control system managing real-time inventory, users, and revenue through a live database.

7. Backend Module

Processes user requests using AI-based intent detection and handles backend operations, APIs, and database management.

How we do!

Frontend Architecture

- React.js
- Tailwind CSS
- Framer Motion
- React Router DOM
- Lucide React

AI Module

Backend Architecture

- FastApi
- Primary LLM: Groq API
(running Llama 3.3 70B)

Other Module

Backend Architecture

- Python
- Django
- Django REST Framework
- Django CORS

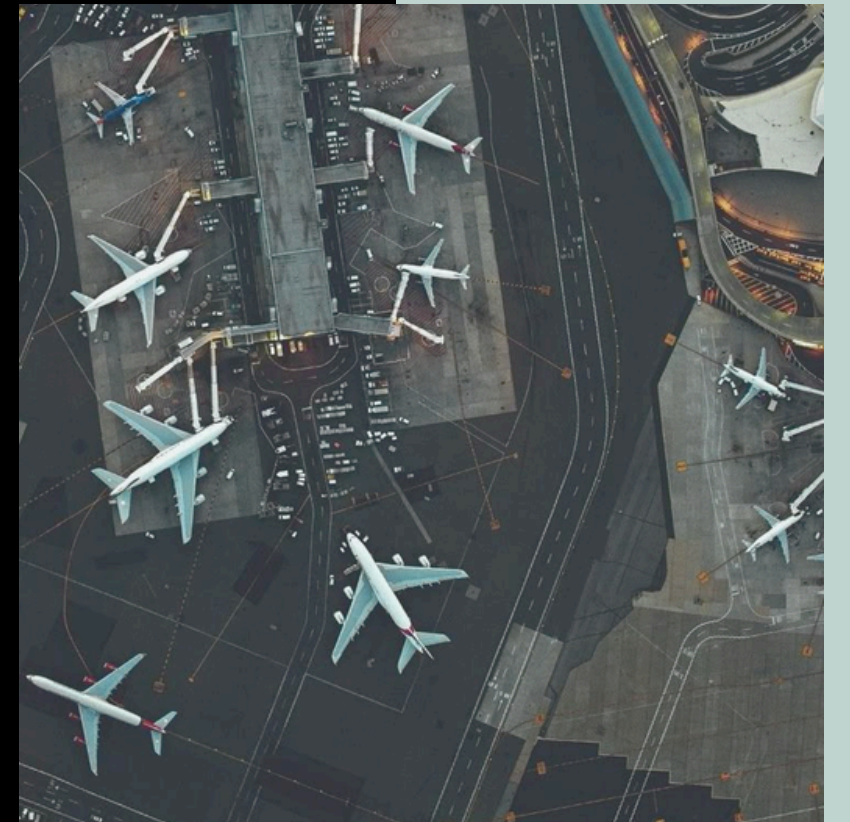

Future

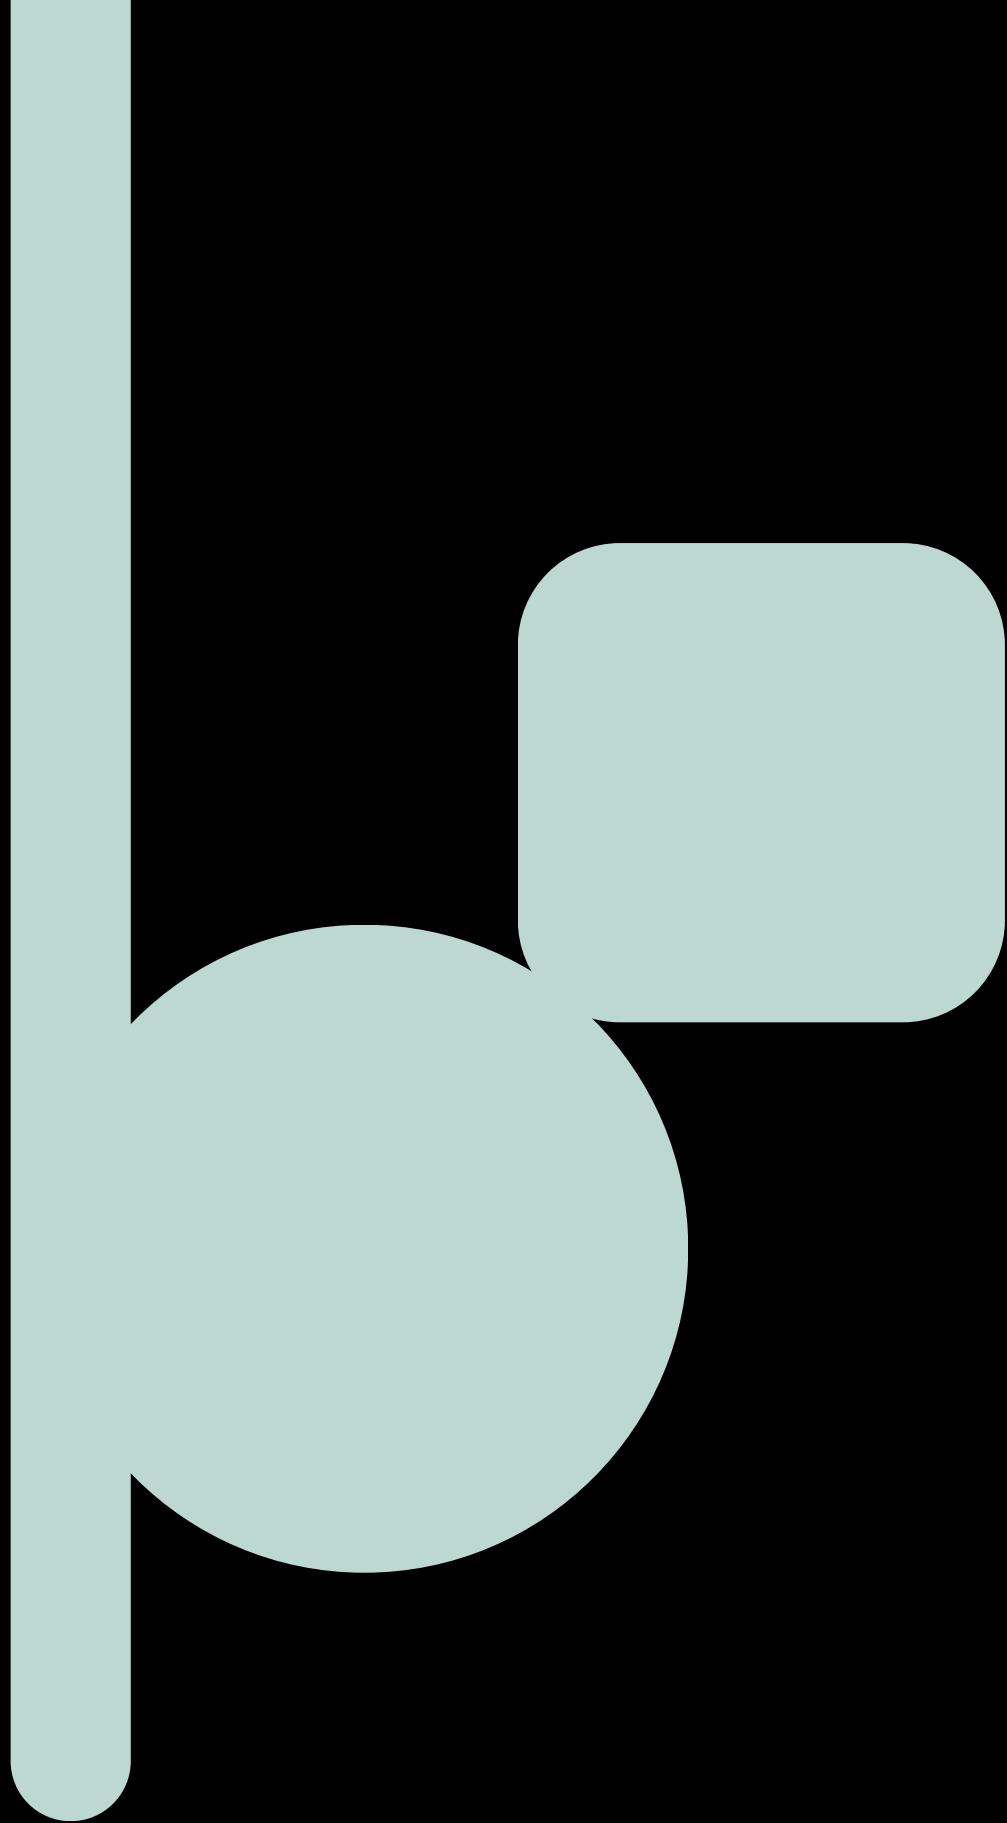

- Passport OCR Scanning
- Personalization & Recommendation Engine (improvements needed)
- Stripe/Razorpay Integration
- Offer listing
- Multi-Currency Support
- Enhancement of Flight Simulation module
- Cargo Booking
- Trip planning(enhancement)

CONCLUSION

Skyloom transforms traditional booking into an intelligent travel planning solution. By integrating flights, hotels, and transportation, it simplifies the user journey and enhances overall efficiency.

THANK
YOU
